

Amendments to the Claims:

This listing of the claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (currently amended) An electronic still camera comprising:
a sensor for capturing images;
a first memory for storing images;
a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a selected destination via a communications interface, wherein said communication interface connects to an RF cellular phone network;

means for loading the network configuration file into the second memory; and

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file.

2. (original) The camera as claimed in claim 1 wherein both first and second memories are memory locations on the same removable memory card.

3. (original) The camera as claimed in claim 1 wherein the second memory permanently resides in the camera and can be loaded with the network configuration file from a host PC.

4. Canceled

5. Canceled

6. Canceled

7. Canceled

8. Canceled

9. (currently amended) An electronic still camera comprising:

a sensor for capturing images;

a first memory for storing images;

a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a plurality of destinations via a communications interface;

means for loading the network configuration file into the second memory; and

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file, and wherein said user interface displays a plurality of descriptive icons representative of the plurality of destinations and selection is made by reference to at least one of the icons.

10. Canceled

11. Canceled

12. Canceled

13. Canceled.

14. (currently amended) The electronic still camera as claimed in claim ~~13~~ 26 wherein the protocol type specifies a TCP/IP.

15. Canceled.

16. (currently amended) The electronic still camera as claimed in claim ~~15~~ 27 wherein the account data includes Internet account data.

17. (currently amended) The electronic still camera as claimed in claim ~~15~~ 27 wherein the account data includes charge number data.

18. (currently amended) The electronic still camera as claimed in claim ~~15~~ 27 wherein the account data includes a billing address.

19. Canceled.

20. Canceled

21. (currently amended) The electronic still camera as claimed in claim ~~20~~ 29 wherein the network configuration file further includes information to enable connection to an identified Internet Service Provider.

22. Canceled.

23. (currently amended) The electronic still camera as claimed in claim ~~22~~ 30 wherein the user interface displays the feedback.

24. Canceled.

25. (currently amended) The electronic still camera as claimed in claim ~~24~~ 31 wherein the user interface displays the feedback.

26. (new) An electronic still camera comprising:
a sensor for capturing images;
a first memory for storing images;
a second memory for storing a network configuration file, said network configuration file containing a protocol type and instruction information for communicating with a selected destination via a communications interface;
means for loading the network configuration file into the second memory; and

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file.

27. (new) An electronic still camera comprising:

a sensor for capturing images;

a first memory for storing images;

a second memory for storing a network configuration file, said network configuration file containing account data and instruction information for communicating with a selected destination via a communications interface;

means for loading the network configuration file into the second memory; and

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file.

28. (new) An electronic still camera comprising:

a sensor for capturing images;

a first memory for storing images;

a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a selected destination via a communications interface and a password used to access the selected destination;

means for loading the network configuration file into the second memory; and

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file.

29. (new) An electronic still camera comprising:

a sensor for capturing images;

- a first memory for storing images;

- a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a selected destination via a communications interface and information identifying an Internet Service Provider;

- means for loading the network configuration file into the second memory; and

- a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file.

30. (new) An electronic still camera comprising:

- a sensor for capturing images;

- a first memory for storing images;

- a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a selected destination via a communications interface;

- means for loading the network configuration file into the second memory;

- a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file; and

- means for receiving from the selected destination, feedback indicating the status of the image transfer.

31. (new) An electronic still camera comprising:

- a sensor for capturing images;

- a first memory for storing images;

- a second memory for storing a network configuration file, said network configuration file containing instruction information for communicating with a plurality of destinations via a communications interface;

means for loading the network configuration file into the second memory;

a user interface for selecting an image destination and for commanding the camera to send the image to the selected destination via the communications interface, using the information in the network configuration file; and

means for receiving from the selected destination, feedback indicating the status of the image transfer.
